

CloudWise AI

UI/UX Design Brief v3.0

Professional Product Design Documentation

Prepared for: Judges • Recruiters • Investors • Contributors

Product Overview

CloudWise AI is a cloud cost optimization platform that helps organizations discover AWS infrastructure, analyze spending patterns, identify waste, and generate actionable recommendations to reduce cloud costs.

Supports:

- Real AWS Accounts
- LocalStack Development Environments

Design Vision

"A modern FinOps command center that makes cloud infrastructure understandable in seconds."

The product balances Enterprise Credibility, Simplicity, Data Density, Speed, and AI-powered Insights. Users should never feel overwhelmed by AWS complexity.

UX Principles

1. **Insight First** – Understand spending, waste, and actions immediately.
2. **Progressive Disclosure** – Metrics → Recommendations → Resources → Metadata.
3. **Action-Oriented Experience** – What is happening? Why? What next?
4. **Trust Through Transparency** – Explain reasons, impact, savings, resources.
5. **Zero Empty States** – Demo Mode, LocalStack Mode, Seed Data.

Target Users

- Startup Founders – Need lower AWS bills and quick insights.
- FinOps Engineers – Need cost visibility and optimization opportunities.
- Cloud Engineers – Need infrastructure visibility and utilization metrics.
- Hackathon Judges – Need immediate understanding and visual impact.

Information Architecture

Dashboard → KPIs, Cost Trends, Resource Distribution, Recommendations

Resources → EC2, EBS

Recommendations → High, Medium, Low Priority

Forecasting → 7/30/90 Days

Reports → Executive Summary, Cost Analysis, Optimization Report

AI Copilot

Settings

User Journey

Landing Page → Create Account → Login → Connect AWS/LocalStack → Verify Credentials → Scan Infrastructure → Dashboard → Recommendations

Expected Completion: Under 3 Minutes

Dashboard Experience

Goal: Provide cloud health overview within 10 seconds.

KPI Cards:

- Total Resources
- Current Monthly Spend
- Potential Savings
- Cloud Health Score

Visualizations:

- 30-Day Cost Trend
- Resource Distribution Donut Chart

Recommendation Experience

Each recommendation card displays:

- Title
- Affected Resource
- Reason
- Monthly Savings
- Priority
- Recommended Action

Example: Delete Unattached EBS Volume → Savings: \$25/month

Resource Explorer

Features:

- Search
- Sort
- Filter
- Pagination

Users should reach any resource within 3 clicks.

AI Copilot Experience

Purpose: Convert cloud complexity into natural language.

Example Queries:

- Why did my spend increase?
- How can I save money?
- Which resource is causing waste?
- Explain this recommendation.

Tone: Professional, Concise, Actionable.

Visual Identity

Theme: Dark Mode First

Style: Modern SaaS, Glassmorphism, Soft Shadows, Large Spacing, Premium Feel.

Colors:

Primary #6366F1
Success #10B981
Warning #F59E0B
Danger #EF4444
Background #0F172A
Surface #1E293B

Typography

Font: Inter
H1: 40px
H2: 32px
H3: 24px
Body: 16px
Caption: 14px

Accessibility Requirements

- Keyboard Navigation
- Focus Indicators
- Screen Reader Support
- WCAG AA Compliance
- High Contrast Text

Performance Goals

Initial Load: Under 2 seconds
Dashboard Load: Under 1 second
API Response: Under 500ms

Mobile Strategy

Primary: Desktop
Secondary: Tablet
Mobile: View-only analytics. Complex workflows remain desktop-focused.

Success Metrics

- Understand cloud health in under 10 seconds
- Find waste in under 30 seconds
- Generate savings insights in under 1 minute
- Navigate major features within 3 clicks

Additional Professional Considerations

Product Goals, Non-Goals, User Pain Points, Design System Components, Error States, and Future Enhancements should be maintained alongside this brief to ensure long-term product scalability.

Final UX Statement

"CloudWise AI should make cloud cost optimization feel as simple as checking a bank account dashboard—clear, actionable, and understandable regardless of a user's AWS expertise."
